## **DETAILED ACTION**

### ***Response to Amendment***

1. In Amendment "D", filed March 5, 2004 (see paper no. 17), **claims 5, 10, 15, 16, 17, 19 and 25** have been amended to correct typographical and/or grammatical errors. **Claims 2-11, 13-19, 21-25** are presented for further consideration.

### ***Response to Arguments***

2. Applicant's arguments filed March 5, 2004 have been fully considered but they are not persuasive.

### ***Claim Rejections - 35 USC § 101***

3. *35 U.S.C. 101 reads as follows:*

*Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.*

4. **Claim 19** is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 19 is directed at a computer data signal embodied in a carrier wave. Abstract ideas (see *Warmerdam*, 33 F.3d at 1360, 31 USPQ2d at 1759) or the mere manipulation of abstract ideas (see *Schrader*, 22 F.3d at 292-93, 30 USPQ2d at 1457-58) are not patentable.

*As disclosed, independent claim 19 focuses on nonfunctional descriptive material, which is inclusive of the mere arrangement of data without engaging functionality when employed as a computer component. Claiming nonfunctional descriptive material merely recorded or residing on a computer-readable medium is deemed non-statutory because it fails to present functionality to facilitate practical application requirements (see MPEP 2106(IV)(B)(1)).*

5. In the remarks, Applicants argue in substance that “...one of ordinary skill in the art would consider the user interaction code segment, the response evaluation code segment, and the training code segment are a part of computer program code segments that are executable by a computer”.

6. In response to the Applicant’s argument, the Examiner agrees that the disclosed claim 19 cites program material that can be implemented within a computing environment. However, as disclosed, the mere admission of a data signal embodied in a carrier wave that contain program material which is capable of performing functions, without actually engaging the perspective functionality, is deemed nonfunctional descriptive material (see above rejection, and prior Office Action). As per U.S. Patent Nos. 6,697,876 and 6,697,706, each application discloses claims that focus on the embodiment of data signals in carrier waves wherein the claimed code is functionally operable within the cited computing environment.

***Allowable Subject Matter***

7. *Claims 2-11,13-18 and 21-25 are allowed.*

8. *The following is a statement of reasons for the indication of allowable subject matter:*

*the cited prior art fails to explicitly teach of a means and method for training a system, whereby a process is employed to train a machine learning system by presenting non-expert internet users (e.g., netizens) with logic facilitated multiple choice queries, from which the system uses responses entered by the netizens to continually update and refine the knowledge generated queries, and subsequently continuing the build of a further refined and larger knowledge base.*

***Conclusion***

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
